Commodity Futures Trading Commission Futures and Options trading has large potential rewards, but also large potential risk. You must be aware of the risks and be willing to accept them in order to invest in the FOREX, futures and options markets. The past performance of any trading system or methodology is not necessarily indicative of future results.

IMPORTANT Recommendations

The following recommendations are to help you get the best and most profitable experience from your use of this software and trading Forex in general.

Please consider following these recommendations as we have reviewed them and utilized them for years successfully – including hundreds of other traders we work with.

Which Forex Broker Should You Use?

This is a broker we highly recommend. They are respectable and work well with LeapFX trading systems, promptly handle withdrawals, and offer good support.

The broker is Blaze Markets you can find them here: <https://www.blazemarkets.com>

Blaze Markets is a broker created by traders that got tired of dealing with poorly run brokerages. They wanted to create one that supports robot trading with optimal conditions. They have very fast execution speeds and competitive pricing.

After signing up with the broker download and install Meta Trader 4, which is provided free by them. (Please choose 100 – 200 leverage, we prefer 200).

Account Type to Use

PRO accounts are preferred with lower spreads and good processing but works with STANDARD accounts too. Minimum recommended deposit is \$1,000 to \$2,000 minimum to maintain safer risk with margin. Even better would be \$3,000 to \$5,000. More funds in the system help it perform far better.

Use A VPS and Everything Will Run Even If Your Computer is Off...

You can avoid leaving your computer on and access your platform from any mobile device using a virtual server. We highly recommend using a VPS always for trading.

Click the link below to learn more about what a VPS is, why we recommend them, and the most reliable and affordable options that we recommend (they are inexpensive).

The preferred VPS service is the CNS option on the page, and selecting London Data Center when prompted.

[Click Here for VPS Recommendations](https://www.leapfx.com/vps) - <https://www.leapfx.com/vps>

Want Someone to Install And Setup The King Robot For You?

Don't feel like setting up the software or prefer someone else to do it for you? Not a problem, click the link below and have a pro do it for you.

<https://www.fxinstall.com> - <https://www.fxinstall.com>

Don't Forget to Activate The King Robot In Members Area

If you haven't already, please go back to member's area and scroll down to the section where you must activate The King Robot with your broker MT4 account number / login number.

This is necessary to allow the software to run on your account. It can be changed anytime if you choose to switch accounts or brokers. It's 1 account per license at a time.

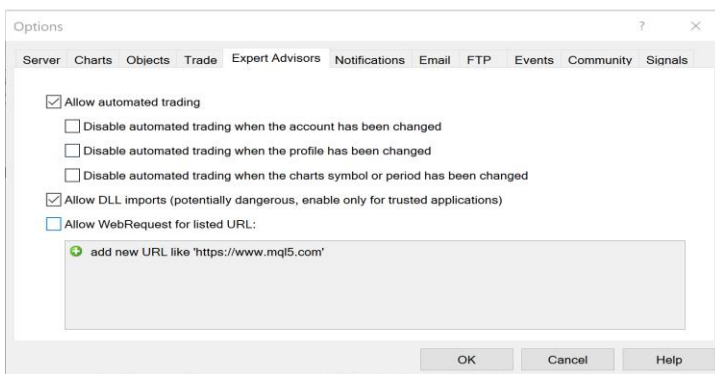

[Click Here To Go To Members Area](https://www.leapfx.com/kr-members/) - <https://www.leapfx.com/kr-members/>

The King Robot Installation AND Setup

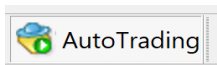

Thank you very much for your purchase, welcome to the The King Robot System.
In this guide, we will look at how to install your EA and how to set it up.

1-Installation

1. Install Meta Trader 4 platform provided by your broker free and open it.
2. You will need to do the following configuration. At the top of MT4, Click Tools>Options>Expert Advisors. Check the same boxes as indicated below, then click Ok:

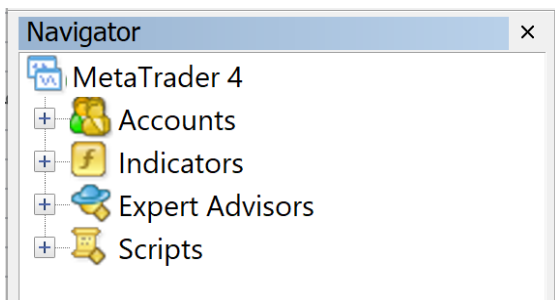

3. On the top of Meta Trader 4 make sure the AutoTrading button is pushed in and GREEN, click it if it's RED.

4. To install **King Robot** you will need to load the **KINGROBOT.ex4** file into the platform's data folder: At the top left of the platform click File>Open Data Folder>MQL4>Experts> and place the **.ex4** file there. Go back to Data Folder and look for Presets, and place the KingRobotAggressive file in there (optional if you want aggressive trading). Now restart the MT4 platform.

5. You should see Navigator window in your Meta Trader 4 platform on the middle left with **KING ROBOT** in it (if you don't see it please click the + sign next to Expert Advisors):

2-Set-Up

6. Now we need to open the windows within Meta Trader 4 for the currency pairs that the robot will be trading on. To do this click the **File** button at the top left, then click on **New Chart**, then you will look for the following currency pairs and click them to open or right click on the pairs in Market Watch (a box with currency pairs on left side of the platform) and click Chart Window (if the pair is missing, right click in the box and click SHOW ALL).

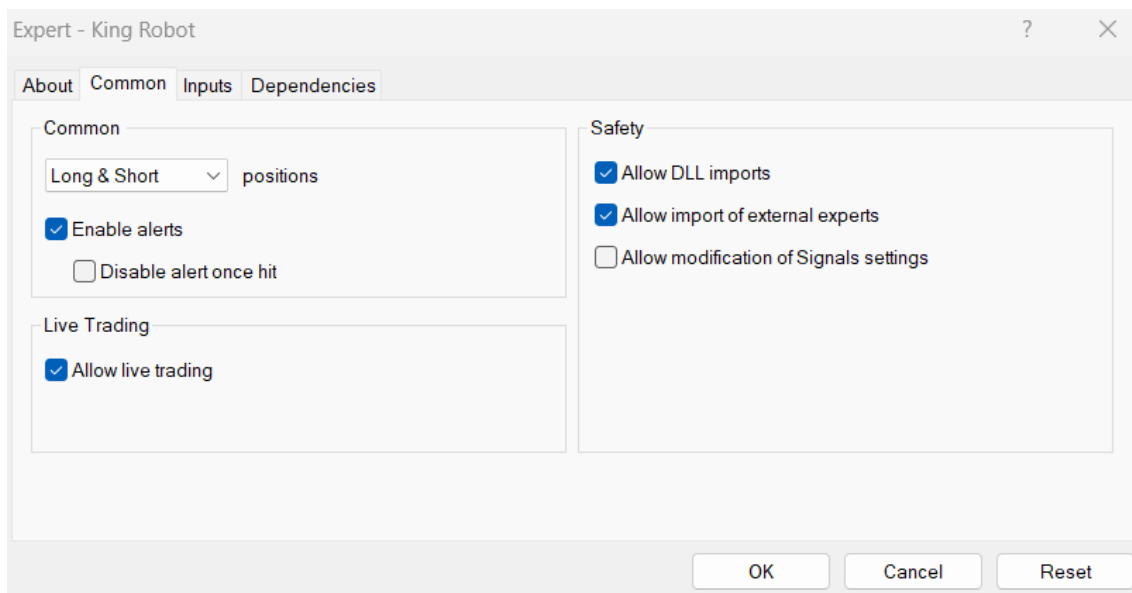

These are the pairs to open: **GBPUSD, USDCHF, USDCAD, AUDUSD**

Some brokers have a suffix to their pair, for example: EURUSD+ or EURUSD.pro. So just make sure the instrument is correct and able to be traded. It does not matter if there is a suffix to the pair, it will still work with the software.

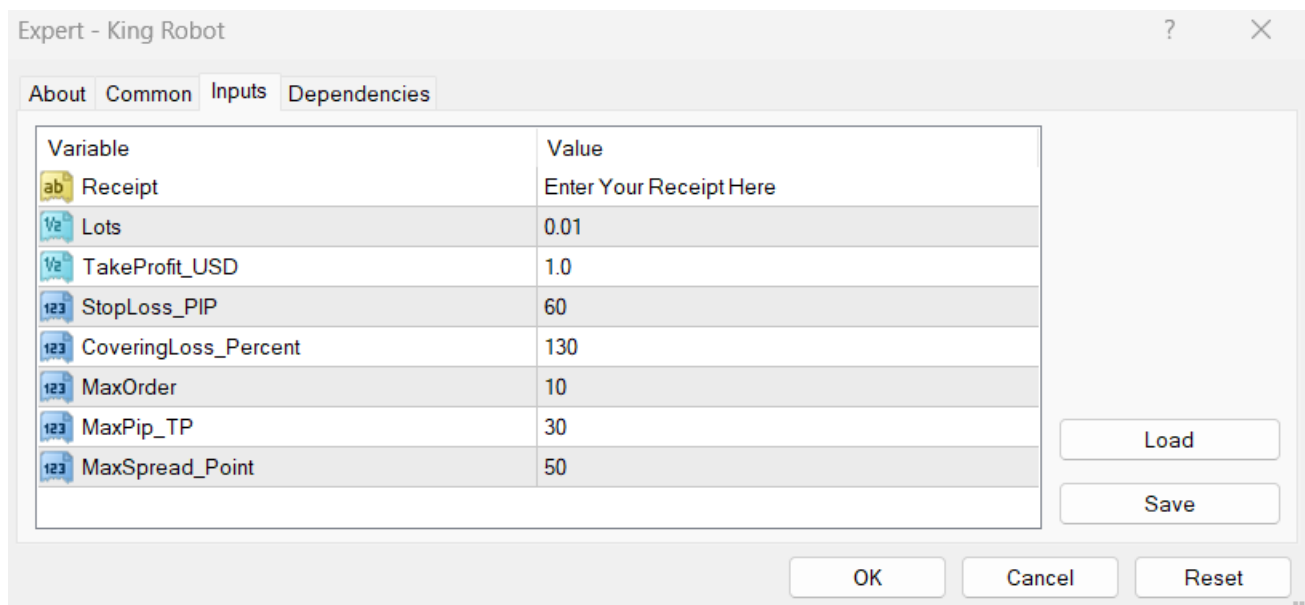

Now you need to hit the H1 button on ALL of the charts to get them all to 1 hour timeframe – click on each chart one at a time, then click H1 at the top one at a time – you can see the H1 button in the image below...

Once you have all the charts open on the 1 hour timeframe, drag the **KING ROBOT** to EACH of the charts from the left side where you see it under Expert Advisors, once it's placed on the chart a box will come up, make sure the check marks match below...

Next click **INPUTS** to find the robot settings... (Lot size recommendations are below)

Variable	Value
Receipt	Enter Your Receipt Here
Lots	0.01
TakeProfit_USD	1.0
StopLoss_PIP	60
CoveringLoss_Percent	130
MaxOrder	10
MaxPip_TP	30
MaxSpread_Point	50

Under inputs... **enter your RECEIPT Code into the RECEIPT field (don't forget to activate your copy first in members area)**, then...

COVERINGLOSS PERCENT SETTING & MAX ORDER

Next you need to set your **CoveringLoss_Percent** setting. This setting by default is 130. This controls the rate at which the lot size will increase. If you are risk averse or are using small account (less than \$5,000), you should consider being between 105 to 120, lower being safest. The higher it is, the more profit and more risk. If you want extremely high risk, then use up to 200. If unsure you can stick with 130 or use less.

For MaxOrder, default is 10, this is the number of levels the robot will increase lot size. So if you want to use high risk but limit it, you may want to do 4 or 5. If using lower risk sometimes a little higher is fine. Default is fine, but an option for you to adjust.

RISK and Lots.

Now let's discuss the Lots and risk sizing.

Below are recommendations for lot sizes based on risks you would like to apply. Please note, that if you want to use more funds you can simply divide the amount below into your account size then multiply that number by the lot size to get the recommend lot size.

For example if lot size is .1 lot for \$10,000, and you want to trade \$20,000. Then divide \$20,000 by \$10,000 = 2. Multiply 2 by .1 = .2 Use .2 lots for \$20,000.

Feel free to choose a lot size within the ranges provided. Note these lot sizes apply to using 105 to 130 range on Coveringloss setting. If you increase it, then you should aim for MUCH LOWER lot sizes than recommended. Because the higher covering loss setting will increase lot size rapidly.

\$2,000 - \$4,000

Low Risk = .01 to .02 LotSize

Medium Risk = .03 to .04 LotSize

High Risk = .05 to .06 LotSize

\$5,000 - \$10,000

Low Risk = .03 to .04 LotSize

Medium Risk = .05 to .06 LotSize

High Risk = .07 to .08 LotSize

\$15,000 - \$20,000

Low Risk = .05 to .06 LotSize

Medium Risk = .07 to .08 LotSize

High Risk = .09 to .1 LotSize

Once done editing settings click OK. Then the robot will run, you can let it run 24 / 7 without touching it. Make sure there is a HAPPY FACE on the top right of each chart.

Other settings description. You can access the Expert settings at any time to make changes to your inputs when the EA is running, you don't need to keep dragging to a chart, right click on the chart and you will see expert advisors -> then properties

Make sure NO errors in journal and expert tab if you are concerned it is not working at anytime.

That is it. Configuration is finished! Let it run on its own 24/7. A VPS is HIGHLY Recommended - A VPS means it will run even if your computer is off and doesn't need to be installed on your computer.

Settings Descriptions – Note, here are a definition of the settings you can adjust. Please be careful adjusting as it will dictate how the robot operates.

Receipt – This is the receipt code you received upon purchase and were emailed. You used this to activate the robot.

Lots – This is the initial lot size used by the robot when trading commences. It can and will increase lot sizes at times.

TakeProfit_USD – This is a multiplier of the take profit. It is used to calculate take profit. Default is best.

StopLoss_PIP – This is the stop loss in pips used for each trade.

CoveringLoss_Percent – If a trade is lost the robot will aim to recover the trade plus a % of profit on top. 100 would be recovering the full amount. Anything about it would recover that amount plus profit on top. If set to 0. It will use fixed lots.

MaxOrder – If the robot loses this many trades in a row, the robot will stop trading and you'll have to increase this number to continue. Or reset the robot by re-attaching it.

MaxPip_TP – The max pip profit the robot will aim for. It can be dynamic.

MaxSpread_Point – No trades will be open if spread exceeds this number. 50 = 5 pips.
