The past performance of any trading system or methodology is not necessarily indicative of future results.

IMPORTANT Recommendations

The following recommendations are to help you get the best and most profitable experience from your use of this software and trading Forex in general.

Please consider following these recommendations as we have reviewed them and utilized them for years successfully – including hundreds of other traders we work with.

Which Forex Broker Should You Use?

There are 2 brokers we highly recommend. Both are respectable brokers that work well with LeapFX trading systems, promptly handle withdrawals, and offer good support.

The first is Blaze Markets you can find them here: <https://www.blazemarkets.com>

Blaze Markets is a broker created by traders that got tired of dealing with poorly run brokerages. They wanted to create one that supports robot trading with optimal conditions. There are very fast execution speeds and competitive pricing.

Please note we highly recommend them as they are EA friendly, and The Money Tree works great on this broker to get most frequency of trades.

The second broker is AdroFX you can find them here: <https://adrofx.com/?refid=7282D919-0101-4257-BB2D-3F4ED124F5A5> (select NA if from US when selecting country, must use our link or they won't accept you).

AdroFX is a solid broker with good trading conditions, prompt withdrawals, and overall good support. The systems work smoothly and has some solid offers. They accept United States Based clients when using our link above (must use our link - select NA for Country if not in the list).

After signing up with one of our recommended brokers download and install Meta Trader 4, which is provided free by them. (Please choose 100 – 200 leverage).

Account Type to Use

PRO accounts are preferred with lower spreads and good processing but works with STANDARD accounts and CENT / MICRO accounts. Minimum recommended deposit is \$300 to \$500, but we prefer \$1,000 to \$2,000 minimum to maintain safer risk with margin.

Use A VPS and Everything Will Run Even If Your Computer is Off...

You can avoid leaving your computer on and access your platform from any mobile device using a virtual server. We highly recommend using a VPS always for trading.

Click the link below to learn more about what a VPS is, why we recommend them, and the most reliable and affordable options that we recommend (they are inexpensive).

[Click Here for VPS Recommendations](https://www.leapfx.com/vps) - <https://www.leapfx.com/vps>

Want Someone to Install And Setup The Money Tree Robot For You?

Don't feel like setting up the software or prefer someone else to do it for you? Not a problem, click the link below and have a pro do it for you.

[Click Here to Have a Pro Install The Money Tree Robot for You](https://www.fxinstall.com) - <https://www.fxinstall.com>

Don't Forget to Activate The Money Tree Robot In Members Area

If you haven't already, please go back to member's area and scroll down to the section where you must activate The Money Tree Robot with your broker MT4 account number / login number.

This is necessary to allow the software to run on your account. It can be changed anytime if you choose to switch accounts or brokers. It's 1 account per license at a time.

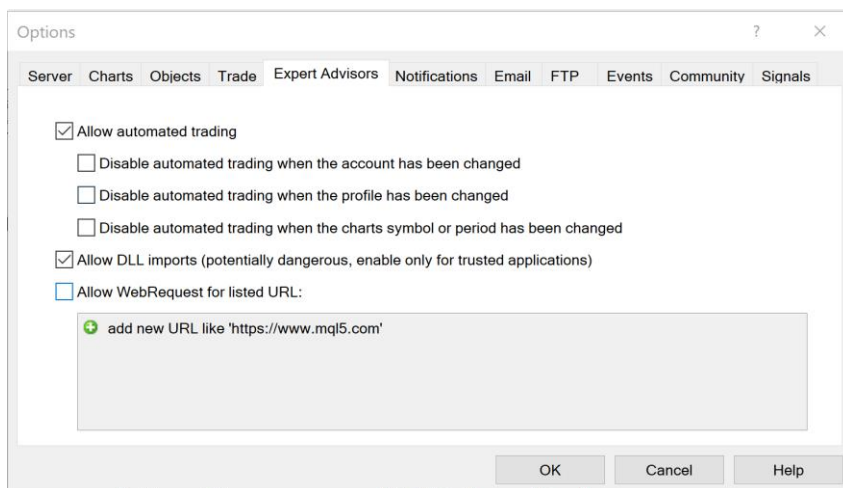

[Click Here To Go To Members Area](https://www.leapfx.com/mt-members/) - <https://www.leapfx.com/mt-members/>

The Money Tree Robot Installation AND Setup

Thank you very much for your purchase, welcome to the The Money Tree System.
In this guide, we will look at how to install your EA and how to set it up.

1-Installation

1. Install Meta Trader 4 platform provided by your broker free and open it.
2. You will need to do the following configuration. At the top of MT4, Click Tools>Options>Expert Advisors. Check the same boxes as indicated below, then click Ok:

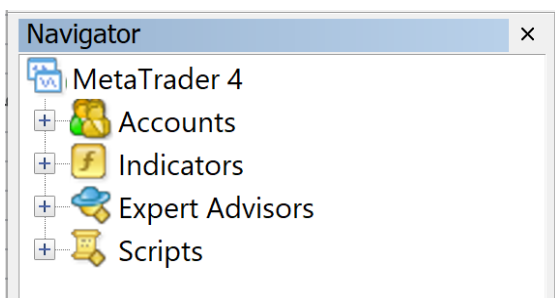

3. On the top of Meta Trader 4 make sure the AutoTrading button is pushed in and GREEN, click it if it's RED.

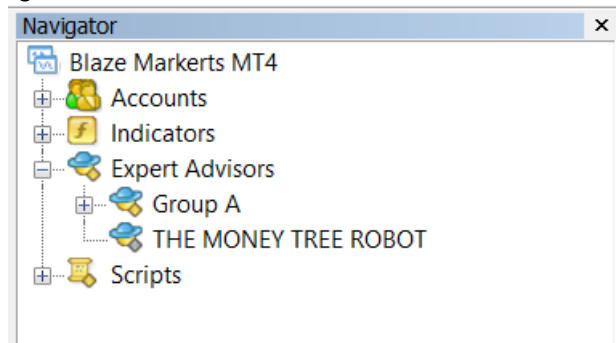

4. To install **The Money Tree Robot** you will need to load the **THEMONEYTREEROBOT.ex4** file into the platform's data folder: At the top left of the platform click File>Open Data Folder>MQL4>Experts> and place the **.ex4** file there. Now restart the MT4 platform.

5. You should see Navigator window in your Meta Trader 4 platform on the middle left with **The Money Tree Robot** in it (if you don't see it please click the + sign next to Expert Advisors):

2-Set-Up

Once you restart your MT4 terminal after installing the EA, you should see **The Money Tree Robot** in the Expert Advisor tree in the Navigator window:

Now we need to open the windows within Meta Trader 4 for the currency pairs that the robot will be trading on. To do this click the **File** button at the top left, then click on **New Chart**, then you will look for the following currency pairs and click them to open or right click on the pairs in Market Watch (a box with currency pairs on left side of the platform) and click Chart Window (if the pair is missing, right click in the box and click SHOW ALL).

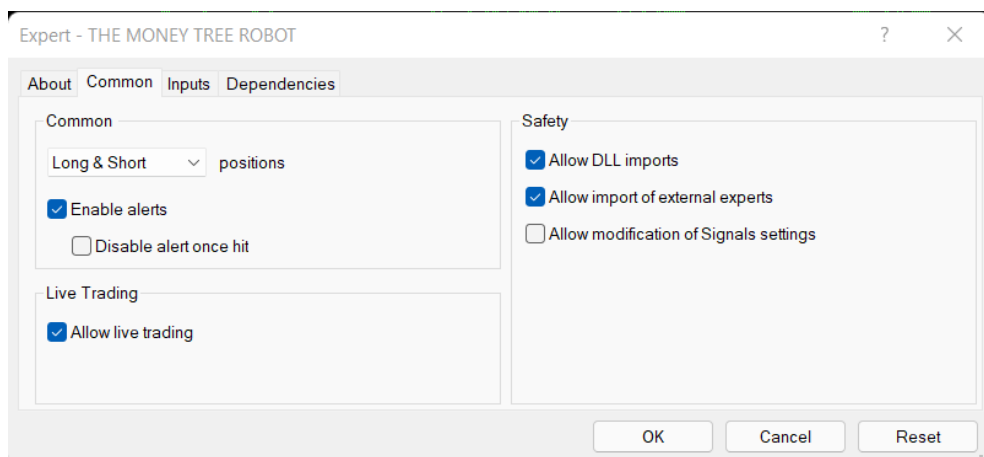

These are the pairs to open: **USDCHF, GBPUSD, EURUSD, USDCAD, AUDUSD, EURGBP, EURAUD, EURCHF, EURJPY, AUDNZD, AUDCAD, AUDCHF, EURNZD, NZDUSD, NZDCAD, NZDCHF, NZDJPY**

Some brokers have a suffix to their pair, for example: EURUSD+ or EURUSD.pro. So just make sure the instrument is correct and able to be traded. It does not matter if there is a suffix to the pair, it will still work with the software.

Now you need to hit the M15 button on ALL of the charts to get them all to 15 min timeframe – click on each chart one at a time, then click M15 at the top one at a time – you can see the M15 button in the image below...

Once you have all the charts open on the 15 minute timeframe, drag the **THE MONEY TREE ROBOT** to EACH of the charts from the left side where you see it under Expert Advisors, once it's placed on the chart a box will come up, make sure the check marks match below...

Next click **INPUTS** to find the robot settings... (Lot size recommendations are below)

Variable	Value
ab Receipt	Enter Your Receipt Here
ab Email	Enter Your Email Here
ab sellOrderComment	MoneyTree
ab buyOrderComment	MoneyTree
Ve LotSize	0.01
123 StopLossBalance	30
123 MaxOrders	5

Buttons: Load, Save, OK, Cancel, Reset

Under inputs... **enter your EMAIL ADDRESS and RECEIPT into the proper spaces (don't forget to activate your copy first in members area), then...**

RISK and LotSize.

Now let's discuss the LotSize and risk sizing.

Below are recommendations for lot sizes based on risks you would like to apply. Please note, that if you want to use more funds you can simply divide the amount below into your account size then multiply that number by the lot size to get the recommend lot size.

Feel free to choose a lot size within the ranges provided.

\$500 and LESS

Low Risk = .01 to .02 LotSize

Medium Risk = .04 to .08 LotSize

High Risk = .1 to .2 Lot Size

\$1,000 - \$2,000

Low Risk = .02 to .05 LotSize

Medium Risk = .06 to .2 LotSize

High Risk = .4 to .8 LotSize

\$3,000 - \$5,000

Low Risk = .05 to .1 LotSize

Medium Risk = .2 to .4 LotSize

High Risk = .8 to 1 LotSize

Continue to next page for next settings adjustments...

sellOrderComment & buyOrderComment: This is the comment that shows next to each trade so you can identify the trades that are taken by The Money Tree robot. You can leave this blank, change it, or leave it as default. Some people prefer to leave it blank so their broker doesn't know which software they are using.

LotSize: Refer to the Risk and LotSizing section on the previous page to set the proper risk you would like to use. This decision goes hand in hand with StopLossBalance setting, so please read that next.

StopLossBalance: This is a safety stop loss that will close open trades the total open trades reaches this %. This is based on whole account. So if there is a \$1,000 account, and it's set at 30. If the account reaches a drawdown of -\$300, it will close the open trades to protect the account. If you are using a prop firm you would want to set this to the max allowed daily drawdown. It is important to note, that if you use lower risk (lower lot size) the default of 30 is fine. But if you'll want to increase it in these few scenarios: If the account is too small, you need to raise it to for example 50, up to even 100. If the account is larger and using low risk, then default is fine. But if using higher risk, or medium you'll want to increase it to at least 40 - 50. The higher the better to give the robot room to recover to profit when market goes against us. So please be aware of this and increase it as you see fit. We prefer 50 and higher for this setting.

MaxOrders: This is based on a PER pair basis. Usually the system trades at 1 - 2 open trades per pair at a time. BUT it can open more. This is the max number of open trades allowed at anytime on a pair. We prefer 5 at a minimum. As this allows the system to recover to profit if in a losing trade.

Please consider using higher stop loss balance, lower lot sizes, larger account - preferably 2 out of the 3 options as that will maximize performance.

Once you are done editing settings click OK. Then the robot will run, you can let it run 24 / 7 without touching it.

How to change settings. You can access the Expert settings at any time to make changes to your inputs when the EA is running, you don't need to keep dragging to a chart. Click the happy face on each chart, then click inputs, make any adjustments, then click OK.

Note it won't always trade instantly, but make sure NO errors in journal and expert tab. Also if it does open trades instantly consider (not mandatory) closing those initial trades as best to let it process more data first.

If everything is loaded properly, there will be text stating: The Money Tree Robot with a smiley emoticon on the top right of each currency pair chart you setup.

That is it. Configuration is finished! Let it run on its own 24/7. A VPS is HIGHLY Recommended - A VPS means it will run even if your computer is off and doesn't need to be installed on your computer.
